

Memorandum

DATE: February 15, 1989
TO: Ron Bates
FROM: Lynn Davison *Lynn Davison*
SUBJECT: Georgetown Steam Plant (GTSP) Flume Filling

I am anxious to obtain your assessment of the drainage situation in the GTSP flume area; specifically, what impact filling the flume will have on local drainage and surrounding properties. This information is needed before plans can be made for filling the flume, and before the SEPA Environmental Checklist can be completed.

The flume closure (filling) project has been in limbo the past year awaiting this and other engineering information on how the flume will be filled. Due to the liability problems in leaving the flume in its current condition, I suggest we get moving on this in 1989.

I understand it may require some outside expertise to answer the questions concerning drainage impacts, and additional time will be needed if this is the case. Therefore, please advise me as soon as possible regarding your schedule for proceeding. Thank you.
